general functions and for polynomial functions is studied in detail together with an original description of the latin hypercube method and of the adam algorithm for training furthermore unique features include the use of tensorflow for implementation session and the description of on going research about the construction of new optimized numerical schemes

this book evaluates the development of the rhodesian air force during the second chimurenga or bush war 1966 1980 airpower in irregular conflict is effective at the tactical level because guerrilla warfare is not a purely military conflict the rhodesian air force was deployed in a war winning versus a supporting role as a result of the shortage of manpower to deal with insurgency and almost all units of the rhodesian security forces depended on its tactical effectiveness technical challenges faced by the air force combined with the rate of guerrilla infiltration and the misuse of airpower to bomb guerrilla bases in neighboring countries largely negated the success of airpower
